

## PUBLIC VERSION

BEFORE THE  
PUBLIC SERVICE COMMISSION  
OF WISCONSIN

Application of Wisconsin Power and  
Light Company for Authority to Adjust  
Electric and Natural Gas Rates  
For 2024 and 2025 Test Years

Docket No. 6680-UR-124

PRE-FILED REBUTTAL TESTIMONY OF  
  
NEIL E. MICHEK  
  
FOR  
  
WISCONSIN POWER AND LIGHT COMPANY

September 19, 2023

1 **Q. Please state your name and business address.**

2 A. My name is Neil E. Michek. My business address is 4902 North Biltmore  
3 Lane, Madison, Wisconsin 53718.

4 **Q. Are you the same Neil E. Michek who submitted direct testimony in**  
5 **this docket on behalf of Wisconsin Power and Light Company**  
6 **(“WPL”)?**

7 A. Yes, I am.

8 **Q. Please briefly describe the purpose of your rebuttal testimony.**

9 A. My rebuttal testimony responds to various aspects the direct testimonies of  
10 Public Service Commission of Wisconsin (“PSCW” or “Commission”) staff  
11 witnesses Jill M. Rose, Justin Adams, and Andrew J. Field, Citizens’ Utility  
12 Board (“CUB”) witnesses Corey S.J. Singletary, and Steven Kihm,  
13 Wisconsin Industrial Energy Group (“WIEG”) witness Lane Kollen, Clean  
14 Wisconsin (“CW”) witnesses Ronald L. Lehr and Eric Borden, Vote Solar

## PUBLIC VERSION

1 and Sierra Club witness William D. Kenworthy, Blacks for Political Social  
2 and Political Action (“BPSA”) and Walmart witness Alex J Kronauer. Topics  
3 addressed generally include, but are not limited to:

- 4 • Proposed revenue requirement adjustments identified primarily in  
5 the testimony of Commission staff witness Rose.
- 6 • Discussions regarding an Earnings Sharing Mechanism (“ESM”) by  
7 Commission staff witness Adams and CUB witness Singletary.
- 8 • Discussions regarding the cost recovery of the Edgewater Unit 5  
9 generating unit after its retirement by CUB witness Singletary and  
10 WIEG witness Kollen.
- 11 • Discussion of existing or proposed deferrals and escrows by  
12 Commission staff witnesses Rose and Field, CUB witness  
13 Singletary, CW witness Borden, and WIEG witness Kollen.
- 14 • Discussion of return on equity (“ROE”) by CUB witness Kihm  
15 Discussion of current return on Construction Work in Progress  
16 (“CWIP”) by Walmart witness Kronauer.
- 17 • Discussion of the Inflation Reduction Act (“IRA”) and impacts on  
18 production tax credits (“PTCs”) and investment tax credits (“ITCs”)  
19 by CW witness Lehr.
- 20 • Brief discussion of the proposed PIP and geo-based targeted energy  
21 efficiency program cost recovery by BPSA witness Colton.

22 **Q. Are you sponsoring any exhibits with your rebuttal testimony?**

23 A. Yes, I am sponsoring six additional exhibits:

## PUBLIC VERSION

- 1           • Ex.-WPL-Michek-12: This exhibit is a copy of a Wisconsin  
2           Department of Revenue, Bureau of Economic Analysis report:  
3           Wisconsin Economic Forecast Update: May 2023
- 4           • Ex.-WPL-Michek-13: This exhibit compares WPL’s actual average  
5           plant-in-service, and construction work-in-progress (“CWIP”)  
6           balances subject to current return, as compared to the test year  
7           approved balances for the last three full calendar years, 2022, 2021,  
8           and 2020.
- 9           • Ex.-WPL-Michek-14: This exhibit provides calculations of the  
10          estimated revenue requirement impacts of a potential change in a  
11          wholesale power supply agreement with [REDACTED]  
12          [REDACTED] These calculations are based upon  
13          WPL’s filed revenue requirement calculations.
- 14          • Ex.-WPL-Michek-15:        This exhibit is a copy of WPL’s notice to  
15          the Commission of its decision to terminate the tax equity partnership  
16          related to certain solar projects in Docket Nos. 6680-CE-182, 6680-  
17          CE-183, 6680-AE-120, and 6680-AE-121.
- 18          • Ex.-WPL-Michek-16c:       This exhibit is a copy of WPL’s response  
19          to Commission staff Data Request No. PSCW-JMR-1.3.
- 20          • Ex.-WPL-Michek-17:        This exhibit provides additional  
21          information about WPL’s experience with increasing underground  
22          locate costs.

## PUBLIC VERSION

- 1           • Ex.-WPL-Michek-18: This exhibit is a copy of WPL’s response to  
2           CW data request 4-CW-1.

3 **Q. Please summarize the proposed Commission staff adjustments to**  
4 **WPL’s filed electric utility revenue requirement that you will address**  
5 **in rebuttal.**

6 A. My rebuttal testimony addresses the following Commission staff proposed  
7 adjustments identified by Commission staff witness Rose:

- 8           • Non-Labor O&M adjustments (not encompassed in other  
9           adjustments below or not addressed by other witnesses):
- 10           ○ Maintenance expense adjustment related to the Kossuth  
11           and Forward Wind farms, and
  - 12           ○ Adjustments to exclude certain industry association dues  
13           and advertising.
  - 14           • Labor costs, including adjustments related to proposed wage  
15           increase levels and vacancy rates.
  - 16           • Excluding impacts of decisions that are currently or will be  
17           pending before the Commission in other dockets, including:
    - 18           ○ West Riverside Sale Tranche II,
    - 19           ○ Edgewater Battery Energy Storage System (“BESS”),
    - 20           ○ Neenah Capacity and Efficiency Project, and
    - 21           ○ Sheboygan Falls Capacity and Efficiency Project.
  - 22           • Adjustments to WPL’s construction work in progress (“CWIP”),  
23           plant in service, depreciation expense and accumulated

## PUBLIC VERSION

1 depreciation forecasts that Commission staff describes as  
2 “budget to actual” adjustments related to (1) plant additions  
3 relative to construction expenditures and (2) plant retirements  
4 relative to plant additions.

5 **Q. Which of the Commission staff adjustments to WPL’s filed electric**  
6 **utility revenue requirement are being primarily addressed in rebuttal**  
7 **by other WPL witnesses and which WPL witnesses are addressing**  
8 **those topics?**

9 A. WPL witnesses Brett Behling and Amanda Blank address monitored fuel  
10 costs. WPL witness Andy Mendyk addresses Commission staff’s proposed  
11 sales forecast adjustment. WPL witness Amanda Yocum responds to the  
12 adjustment related to incentive compensation. And WPL witnesses Ann  
13 Bulkley and Albert Rauch respond to testimony regarding ROE.

14 **Q. Please summarize your understanding of Commission staff’s**  
15 **proposed adjustments to O&M costs for the Kossuth and Forward**  
16 **wind farms.**

17 A. My understanding is that Commission staff simply divided actual annual  
18 historical non-labor O&M costs at the facilities by actual generation output  
19 at the wind farm facilities to derive a three-year average of O&M per  
20 Megawatt hour (“MWh”) and then applied the historical average O&M per  
21 MWh to the forecasted MWh of output for the facilities in the test years to  
22 derive a projected O&M level for the test years. Then Commission staff  
23 subtracted the resulting forecast from WPL’s filed forecasts to derive the  
24 proposed adjustment.

## PUBLIC VERSION

1 **Q. Does WPL agree with Commission staff's proposed adjustment and**  
2 **its method of determining an O&M forecast for these wind farms?**

3 A. No, WPL disagrees with the proposed adjustment for various reasons. The  
4 method used by Commission staff assumes that O&M at these wind farms  
5 is entirely variable and linearly consistent on a dollar per MWh basis each  
6 year. Commission staff have not previously taken this approach to adjusting  
7 O&M for any of WPL's other generation resources, as it differs from how  
8 maintenance costs are actually incurred in practice. Variances in generation  
9 are generally driven by wind speeds, operational availability, transmission  
10 outages, and economic curtailments. These factors have a de minimis  
11 impact on O&M costs at the wind facilities. Maintenance costs will vary by  
12 year by facility at wind farms (just as they do at fossil fuel fired generation  
13 facilities) but are generally done to maintain availability of the wind farms  
14 regardless of generation output. Further, lease costs at the wind farms are  
15 at fixed costs that escalate through time completely independent of  
16 generation.

17 WPL's O&M forecast for the Kossuth wind farm is higher relative to  
18 history due in part due to the expiration of a parts warranty in 2022, which  
19 will place increased financial responsibility for maintenance activities on  
20 WPL. WPL has also noted increased unplanned maintenance due to blade  
21 issues.

22 With respect to the Forward wind farm, WPL relies upon the annual  
23 budgets prepared by the operator, Wisconsin Public Service Corporation. A

## PUBLIC VERSION

1 majority of the O&M budget at the Forward wind farm are fixed based upon  
2 service contracts that include annual escalation.

3 In addition, this proposed adjustment seems to isolate in one  
4 subcomponent of overall production-related O&M that was projected to  
5 increase relative to history. If I apply the same methodology used by  
6 Commission staff to the total production related non-labor O&M in the 2024-  
7 2025 test year period, adjusting to exclude the O&M for new solar, the  
8 average O&M per MWh for the biennial test year period is lower than the  
9 prior three-year average.

10 **Q. Please explain your understanding of PSCW staff's proposed**  
11 **adjustments related to industry association dues and advertising.**

12 A. Commission staff's testimony doesn't provide much explanation other than  
13 making adjustment consistent with Commission staff practice. My  
14 understanding is that Commission staff adjusted WPL's forecasted  
15 advertising costs to a three-year average and inflated to the test year  
16 forecast that they supported. It is my understanding that Commission staff's  
17 review of past advertising costs and WPL's allocations or assignment of  
18 costs raised no concerns about WPL's above-the-line costs being  
19 consistent with the statutory limitations for inclusion in rates.

20 My understanding is that Commission staff's adjustments associated  
21 with disallowing community and economic development dues and  
22 disallowing a portion of certain industry association dues, and disallowing  
23 anything not discretely identifiable.

**PUBLIC VERSION**

1 **Q. Does WPL agree with Commission staff's proposed adjustments**  
2 **related to advertising expense and dues?**

3 A. No, WPL does not agree with the adjustments. As stated above I'm not  
4 aware that Commission staff has identified any such advertisements as  
5 being inconsistent with Wisconsin statutes.

6 As it pertains to the adjustments associated with dues, WPL  
7 disagrees with complete or partial adjustments to various industry  
8 association dues. Industry associations provide opportunities to share and  
9 learn operational experiences and challenges as well as providing  
10 appropriate industry relationships in the event needed. As an example, WPL  
11 has been able to utilize its EEI membership to develop strategies and  
12 coordinate responses as to how to utilize the provisions of the IRA for the  
13 benefit of customers, with there being a substantial amount of proposed  
14 regulation being implemented in response to the legislation where a  
15 combined force of knowledgeable individuals with differing perspectives are  
16 extremely valuable in protecting WPL's customers interests. WPL's  
17 responses to Commission staff data requests summarized costs that that  
18 did not identify specific vendors or counterparties. Identifying those  
19 additional costs down to the vendor or counterparty level would have  
20 required material manual investigation of individual employee expense  
21 reports as well a deeper manual evaluation of transactions. I cannot  
22 immediately confirm, but expect, that much of those costs are related to  
23 individual professional dues.

## PUBLIC VERSION

1 WPL records all lobbying costs, including allocations of lobbying  
2 costs identified by the utility associations, as below-the-line and forecasts  
3 such costs consistently. With regards to disallowing community economic  
4 development costs, WPL also disagrees with the appropriateness of such  
5 adjustments. WPL strives to be an active partner with the communities it  
6 serves and considers those costs to be a normal, just, reasonable, and  
7 appropriate utility operations costs.

8 **Q. Please summarize your understanding of Commission staffs' payroll-**  
9 **related adjustments.**

10 A. My understanding is that Commission staff's payroll-related adjustment is  
11 based upon two factors. First, Commission staff adjusted the projected  
12 vacancy rates based on 2022 and 2023 information. Second, Commission  
13 staff also made an adjustment that reflected assumed wage increases for  
14 non-union employees based upon inflation rates of 2.5% for 2024 and 2.2%  
15 for 2025.

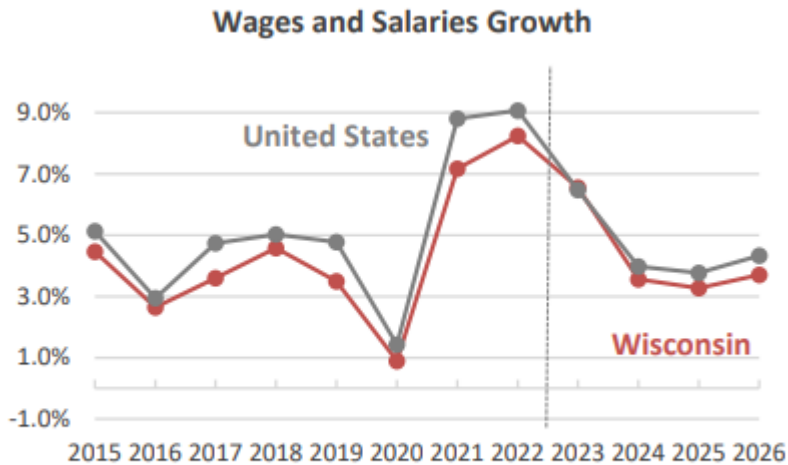

16 **Q. Does WPL agree with Commission staff's proposed payroll**  
17 **adjustments?**

18 A. No, WPL does not agree with the proposed payroll adjustments. As it  
19 pertains to the vacancy rate adjustment, WPL recognizes that recent history  
20 could support a higher vacancy rate than WPL forecasted. That is not  
21 surprising as, I understand, that the labor market was very tight during 2021  
22 and 2022. However, I understand that WPL is starting to see the labor pool  
23 increase with increased numbers of applicants for open positions. Both  
24 WPL and Alliant Energy Corporate Services ("AECS") headcounts have

**PUBLIC VERSION**

1 increased throughout 2023 compared to year-end 2022. The test year  
2 forecasts of labor are based upon projections of the labor needed to provide  
3 safe utility service while recognizing that a vacancy level will always exist.

4 Commission staff’s assumptions of 2.5% and 2.2% wage increases  
5 for 2024 and 2025 are inconsistent with current and projected labor market  
6 expectations. While I’m not a labor economist, information I’ve reviewed  
7 support wage increase expectations higher than WPL’s assumption of 3%.  
8 In its Wisconsin Economic Forecast Update: May 2023, which is the most  
9 recent update, the Wisconsin Department of Revenue (“WDOR”) forecast  
10 Wisconsin wage growth of 3.6% in 2024 and 3.3% in 2025, which follow a  
11 6.6% increase in 2023. The following chart is from WDOR’s May 2023  
12 update, which is provided at Ex.-WPL-Michek-12.

Sources: Bureau of Economic Analysis and Wisconsin DOR (forecast).

13 This data demonstrates that WPL’s assumed 3% wage increase  
14 assumptions are reasonable, if not conservative.

15 **Q. Please summarize your understanding of the adjustments to exclude**  
16 **costs and benefits of projects or regulatory activities that are currently**

1           **or are anticipated to be pending before the Commission at the time of**  
2           **the decision in this proceeding.**

3    A.    Commission staff proposed adjustments to O&M, capacity costs, monitored  
4           fuel costs and benefits, and adjustments to rate base associated with  
5           various projects or regulatory proceedings that are currently pending or are  
6           anticipated to be pending before the Commission at the time of the  
7           Commission's decision in this proceeding. These projects include (1) the  
8           sale of a second tranche of West Riverside to Wisconsin Public Service  
9           Corporation and Madison Gas and Electric Company, (2) the proposed  
10          99 MW BESS at Edgewater, and (3) the capacity and efficiency  
11          improvement projects at Neenah and Sheboygan Falls generating stations.  
12          The Commission staff's rationale for these adjustments is that the  
13          Commission has not yet approved these projects.

14   **Q.    Did WPL's filing in the proceeding recognize the current status of**  
15   **these projects?**

16   A.    Yes, WPL anticipated that the applications for those projects may remain  
17          pending before the Commission at the time the Commission issues its final  
18          decision in this rate review proceeding. WPL included the costs and benefits  
19          of these projects in the filing, though, as we anticipate that the  
20          Commission's decisions regarding those projects will align with WPL's  
21          assumptions. It is reasonable to include the costs and benefits of the  
22          projects in revenue requirement as, WPL believes, it better reflects the costs  
23          and benefits that will be seen during the test years.

## PUBLIC VERSION

1 WPL recognizes, however, that the Commission's decisions relative  
2 to those projects or the precise timing of those projects could differ from its  
3 assumptions. To help mitigate this risk, WPL proposed deferral mechanism  
4 protections. Those mechanisms will protect both customers and the  
5 Company should the actual timelines and approvals differ from the  
6 assumptions underlying WPL's identified revenue requirements.

7 **Q. Has the Commission approved similar deferral treatment in the past,**  
8 **while also including projected costs of the proposed projects in**  
9 **revenue requirement?**

10 A. Yes, in WPL's last rate proceeding, Docket No. 6680-UR-123, the  
11 Commission approved revenue requirements that included projected costs  
12 for WPL solar project that had not yet been approved by the Commission,  
13 subject to revenue requirement deferral protection (PSC REF#: 427760).  
14 The Commission ultimately approved those solar projects; however, the in-  
15 service dates for the projects differed from the assumptions underlying  
16 WPL's revenue requirements. As a result, the deferral mechanism resulted  
17 in the deferral of a regulatory liability balance. That regulatory liability  
18 balance is also being addressed in this proceeding and is offsetting, in part,  
19 the necessary revenue change.

20 **Q. Are there other reasons that WPL opposes Commission staff's**  
21 **adjustments to exclude the costs and benefits for these pending**  
22 **projects?**

23 A. These projects have material revenue requirement impacts in the test years.  
24 Excluding costs and benefits, only to defer those costs and benefits to the

## PUBLIC VERSION

1 future will result in lower cash flow for WPL than appropriate given the  
2 projected level of investments. If these transactions are approved, WPL will  
3 have to finance those projects in the near term and would then not have  
4 corresponding cash flow until WPL's next rate case. In addition, deferral will  
5 likely result in the build-up of a regulatory asset balance that will simply push  
6 cost recovery to WPL's next rate case and placing cost pressure in that  
7 docket.

8 In addition, Commission staff's proposed adjustment to exclude the  
9 Edgewater BESS project actually increases the test years revenue  
10 requirements as excluding the project also eliminates the projected ITC  
11 utilization during the test year and decreases the amount of administrative  
12 and general expenses that are capitalized. WPL anticipates that the timing  
13 of the Commission's decision regarding the Edgewater BESS could align  
14 closely with the Commission's final decision in this proceeding. On  
15 August 1, 2023, a 90-day extension on the timeline for issuing a final  
16 decision in that docket (Docket No. 6680-CE-184) was granted under Wis.  
17 Stat. § 196.49(5r)(b).<sup>1</sup> As a result, the deadline for a decision in that docket  
18 is now December 19, 2023.

19 Similarly, excluding the sale of West Riverside also increases the  
20 revenue requirements relative to WPL's filed case. Furthermore, as  
21 discussed by WPL witness Brett Behling, excluding the anticipated sale of  
22 125 MW of West Riverside would result in an artificially low 2024 Fuel Cost

---

<sup>1</sup> See Request for Extension of Time Pursuant to Wis. Stat. § 196.49(5r)(b), Docket No. 6680-CE-184, Granted (Aug. 8, 2023) (PSC REF#: 475922). (*This citation is not record evidence.*)

**PUBLIC VERSION**

1 Plan. If the West Riverside sale is ultimately approved, then all-else-equal  
2 that would increase the likelihood of a Deferred Asset Debit Balance to be  
3 recovered in WPL's 2024 Fuel Cost Plan fuel reconciliation in 2025.

4 **Q. If the Commission agrees with Commission staff's proposal to**  
5 **exclude the costs and benefits of these projects, what corresponding**  
6 **treatment does WPL propose if the projects are ultimately approved**  
7 **and constructed?**

8 A. If the Commission excludes the projected revenue requirements for any, or  
9 all, of these projects, then WPL requests that the Commission authorize  
10 deferral of all revenue requirement impacts of the projects and carrying  
11 costs based upon the pre-tax (i.e., economic) cost of capital approved by  
12 the Commission in its Final Decision this proceeding. The use of the  
13 economic cost of capital for carrying costs is consistent with Commission  
14 staff's recommendation.<sup>2</sup>

15 **Q. Please explain your understanding of Commission staff's "budget to**  
16 **actual" plant-related adjustments?**

17 A. Commission staff witness Rose states that the rationale for this adjustment  
18 is staff's conclusion that WPL "forecasted a faster entry of plant in service  
19 than what has actually occurred."<sup>3</sup> I disagree with that statement. Looking  
20 at what has actually occurred in the past, some functional categories of  
21 plant have actually outpaced the rate that was forecasted substantially,

---

<sup>2</sup> See Direct-PSC-Rose-13.

<sup>3</sup> See Direct-PSC-Rose-10.

## PUBLIC VERSION

1 while others have been entered more slowly. But, overall WPL has a track  
2 record of the actual pace being close to its forecast.

3 With regard to staff's adjustment method, my understanding is that  
4 Commission staff evaluated information provided by WPL in response to  
5 Initial Data Request 92 (Ex.-WPL-Application: IDR 92) that provided  
6 comparisons of CWIP, Plant in Service, and Accumulated Depreciation  
7 forecasts from prior rate cases to actual results for the same time periods.  
8 Commission staff then adjusted that data for discrete large project impacts  
9 that can easily skew budget-to-actual analyses. PSCW staff analyzed the  
10 rate of entry within each functional category of plant. That analysis showed  
11 that the rate was faster in some categories and slower in others. However,  
12 staff did not equally make adjustment across all categories. Rather, they  
13 made no adjustments where entry was faster in practice, and only proposed  
14 adjustments to categories where the forecasted entry was faster. Overall, I  
15 believe that the selective adjustment leads to less accurate results.

16 **Q. Does WPL agree with Commission staff's "budget to actual" plant-**  
17 **related adjustments?**

18 A. No, WPL disagrees with both the methods that Commission staff used to  
19 arrive at its adjustments and the ultimate results. Commission staff's  
20 proposed adjustments related to plant additions relative to construction  
21 expenditures for functional plant categories only where the budget-to-actual  
22 analysis showed results lower than 100% of forecast. However,  
23 Commission staff ignored functional categories that showed results greater  
24 than 100% of forecast. As such, the analysis is unbalanced and biased to

## PUBLIC VERSION

1 only produce adjustments to lower the filed amounts. Such an analysis  
2 would be more balanced if it evaluated the whole and then utilized the  
3 functional information only if the total supported similar results. In addition,  
4 Commission staff's adjustment methodology effectively compounds the  
5 impacts over time resulting in an unreasonably high forecast of CWIP  
6 balances that earn a current return. While earning a current return on CWIP  
7 mitigates some of the impact, an overly high CWIP balance assumptions of  
8 projects that do not convert to plant in service results in an understatement  
9 of depreciation expense.

10 Exhibit Ex.-WPL-Michek-13 provides a comparison of WPL's actual  
11 average plant-in-service and current return CWIP balances for the years  
12 2022, 2021 and 2020 as compared to the applicable approved test year  
13 balances for the corresponding years. This summary analysis demonstrates  
14 that WPL's overall construction activities align very well with forecasts  
15 approved in each rate proceeding. Over the three-year period, the  
16 cumulative variance was less than one-half of one percent of total plant-in-  
17 service, with actual plant-in-service being actually higher than the amount  
18 incorporated into revenue requirements. Moreover, the summary analysis  
19 shows that the Commission staff's adjustment results in a forecast of current  
20 return CWIP balances that materially exceed most recent years.  
21 Accordingly, WPL recommends that the Commission not accept  
22 Commission staff's proposed budget-to-actual adjustments.

23 **Q. Commission staff witness Rose suggests that the Commission could**  
24 **consider requiring WPL to write-off the remaining COVID-19 deferred**

1 **balances consistent with the Commission’s decisions in Docket Nos.**  
2 **6690-UR-127 and 5-UR-110. Can you please respond?**

3 A. WPL does not support Commission staff’s suggestion that the Commission  
4 should require WPL to write-off prudently incurred costs associated with the  
5 COVID-19 pandemic. The Final Decision in WPL’s last rate proceeding  
6 provided for estimated recovery of the deferred COVID-19 costs. The  
7 amounts proposed for recovery in this proceeding simply reflect the true-up  
8 and finalization of amortizations of the final deferred costs. In addition, the  
9 Settlement Agreement approved in the Commission’s Final Decision in  
10 WPL’s last rate proceeding specifically indicated that amortizations of  
11 regulatory assets and liabilities reflected in the 2022 and 2023 test year are  
12 subject to true-up to actual costs in WPL’s next rate proceeding, which is  
13 this proceeding. (Docket No. 6680-UR-123, Settlement, Att. A, Section E,  
14 ¶ 16.)<sup>4</sup>

15 **Q. Please identify and respond to additional deferrals and escrows**  
16 **discussed by Commission staff witness Rose.**

17 A. Ms. Rose’s testimony supports the continuation of the following consistent  
18 with WPL’s filing: Conservation Escrow, Farm Wiring Escrow, and  
19 Transmission escrow. In addition, Ms. Rose’s testimony supports the  
20 continued deferral accounting treatment if anticipated retirement dates of  
21 coal-fired generation facilities change from the retirement date assumptions  
22 assumed in this proceeding. WPL remains supportive of those symmetrical

---

<sup>4</sup> This citation is not record evidence.

1 protection mechanisms. Ms. Rose’s testimony didn’t discuss continuation  
2 of the existing Bad Debts Escrow. WPL also supports continuation of the  
3 Bad Debts Escrow as indicated in my direct testimony.

4 Ms. Rose also notes that Commission staff has no concerns with  
5 WPL’s requested deferral treatment for the Power Partnership program if  
6 the program is approved by the Commission and suggests that the  
7 “Commission may wish to consider granting the requested treatment.”  
8 (Direct-PSC-Rose-19.)

9 **Q. At Direct-PSC-Rose-19, Ms. Rose suggests that the Commission may**  
10 **wish to require final true-ups in WPL’s next rate proceeding for the**  
11 **Solar Project revenue requirement deferral, the Late Payment Fee and**  
12 **Credit Card escrows. Can you please respond?**

13 A. WPL supports these recommendations.

14 **Q. At Direct-PSC-Rose-20-21, discusses deferral of impacts associated**  
15 **with the IRA or the Infrastructure Investment Jobs Act (“IIJA”) and**  
16 **indicates that the Commission may wish to require WPL to defer any**  
17 **impacts of these. Can you please comment on this?**

18 A. WPL’s revenue requirements in this proceeding reflect anticipated impacts  
19 of this legislation. WPL is generally not opposed to deferral of incremental  
20 impacts beyond those assumed in the revenue requirement calculations  
21 and specifically proposed the tax credit escrow to capture the impacts of  
22 variances in tax credit transferability costs. However, Commission staff  
23 does not identify what additional impacts they anticipate that may merit  
24 deferral. Later in my testimony, I provide an example of an opportunity

## PUBLIC VERSION

1 related to a hydroelectric plant that WPL is pursuing with the goal of bringing  
2 increased benefit to customers. WPL believes deferring the costs and  
3 benefits associated with such an opportunity is reasonable.

4 **Q. What is your response to Ms. Rose's suggestion, at Direct-PSC-Rose-**  
5 **21, that the Commission may wish to exclude deferral/escrow**  
6 **treatment of PTCs associated with existing wind generation facilities**  
7 **on the basis that existing PTCs for wind generation have already been**  
8 **established?**

9 A. I believe Commission staff misinterprets WPL's proposed escrow treatment  
10 of tax credits. The IRA allows for the transferability of PTCs generated after  
11 2022; this includes PTCs generated from both new facilities and existing  
12 facilities. WPL does not yet know the cost of transferability but has reflected  
13 estimated costs in this proceeding. WPL is proposing escrow treatment for  
14 PTCs to address various risks, including (among others) the cost of  
15 transferring ITCs and the timing of such transfers.<sup>5</sup> PTCs generated from  
16 existing facilities after 2022 are subject to the same cost of transferability  
17 uncertainty as those generated from new assets. Accordingly, the rationale  
18 for escrow treatment equally applies to the existing facilities as it does to  
19 the new facilities.

20 **Q. Please identify and respond to Commission staff witness Andrew**  
21 **Field's discussion of WPL's proposed capacity escrow.**

---

<sup>5</sup> See Direct-WPL-Michek-c-57.

## PUBLIC VERSION

1 A. It appears that witness Field opposes WPL's proposed capacity escrow  
2 overall. However, his testimony is unclear on this point since his discussion  
3 focuses only on the MISO Capacity Purchases and Bilateral Capacity  
4 purchase, without addressing the Sheboygan Falls Lease or the Co-Op  
5 Capacity Credits.

6 Commission staff witness Field questions the relevancy of escrow  
7 treatment of purchased power capacity costs generally. In part, Mr. Field  
8 points to the fact that WPL does not anticipate capacity deficits in future  
9 years. Further, Mr. Field implies that escrow treatment somehow removes  
10 incentives for WPL to maintain sufficient capacity, that deferral treatment is  
11 often tied to costs outside the control of the utility, and that WPL controls its  
12 ability to meet capacity needs. Mr. Field also testifies that Commission staff  
13 does not consider the capacity escrow to be a corollary to capacity sales  
14 under the Fuel Rules. Finally, Mr. Field further points to the opportunity to  
15 address specific issues separately in the future, if needed.

16 Mr. Field characterizes the costs to which WPL seeks escrow  
17 treatment as within WPL's control. WPL disagrees with this  
18 characterization. As noted in my direct testimony, the capacity costs that  
19 WPL proposes to be subject to escrow include the impacts of the  
20 Sheboygan Falls lease costs (which are effectively rental costs for the right  
21 to the capacity of Sheboygan Falls), wholesale capacity credit costs, and  
22 Midcontinent Independent System Operator, Inc ("MISO") capacity costs.

23 **Q. Can you please expound upon how the escrow treatment relates to the**  
24 **Sheboygan Falls lease costs?**

## PUBLIC VERSION

1 A. The proposed escrow protection for Sheboygan Falls leases recognizes  
2 that the proposed upgrades at Sheboygan Falls pending before the  
3 Commission in Docket No. 6680-CE-186. The outcome of that proceeding  
4 will result in updated lease costs. The outcome of that proceeding and the  
5 related lease are at this point outside of the control of the utility. As proposed  
6 by WPL, the capacity escrow treatment for Sheboygan Falls addresses the  
7 full lease costs and ensures that customers only pay actual, Commission-  
8 approved lease terms. Further, as proposed in that construction docket and  
9 this regulatory proceeding, the costs that would be incurred related to the  
10 Sheboygan Falls lease during construction are in lieu of allowance for funds  
11 used during construction (“AFUDC”) treatment, which as AFUDC would  
12 have no uncertainty over its deferral and eventual recovery. The final actual  
13 costs of the project and the in-service date will also influence the actual  
14 lease costs, and the escrow treatment will provide symmetrical protections  
15 to customers and WPL. With this escrow, WPL is merely asking for similar  
16 treatment.

17 **Q. What about the wholesale capacity credit costs?**

18 A. Similarly, wholesale capacity credit costs are outside the control of WPL as  
19 the forecasted costs are all contingent upon the slate of projects that are  
20 pending before the Commission: (1) West Riverside sale; (2) Edgewater  
21 BESS, (3) Neenah capacity and efficiency, and (4) Sheboygan Falls  
22 capacity and efficiency. The ultimate approval, timing of these projects and  
23 the final costs of these project all impact the wholesale capacity credit costs.

## PUBLIC VERSION

1 The escrow mechanism will help ensure that the wholesale capacity credit  
2 costs are properly aligned between customers and the Company.

3 **Q. Why does WPL believe that the ability to escrow capacity purchases**  
4 **is needed?**

5 A. While WPL can, to some degree, control its long-term capacity position  
6 (subject to regulatory approval of projects proposed to fill the capacity  
7 position), WPL does not control the market price of capacity in MISO. As  
8 has been demonstrated in the last several years, the market price of  
9 capacity can be volatile. In addition, the methodology for determining  
10 capacity positions in the auction process are in a process of significant  
11 change, with MISO changing its methodologies in determining load  
12 requirements and assigning seasonal accreditation, which provide further  
13 uncertainty as to the outcome of the auction process.

14 WPL disagrees with Mr. Field's characterization that the capacity  
15 escrow is not a corollary to capacity sales, the latter of which is subject to  
16 the Chapter PSC 116 Fuel Costs (a/k/a Fuel Rules). Commission staff  
17 indicates that they believe that purchased capacity costs tend to be for a  
18 set number of MW for set period of time, in contrast to capacity sales that  
19 can vary in MW, price and time. As a result, Commission staff indicates that  
20 capacity sales revenue tend to be more volatile than purchased power  
21 revenue.

22 It is important, however, to consider the current capacity market  
23 world, including the MISO capacity auction process and, more notably, the  
24 move to a seasonal capacity market construct, which introduced even more

1 uncertainty in the process. At its most fundamental level, WPL is required  
2 to purchase every MW of its load (capacity) obligation by season within the  
3 MISO residual auction, while it can offer to sell the accredited capacity for  
4 each season at certain prices.<sup>6</sup> However, the new seasonal construct  
5 continues to evolve. For example, there are ongoing methodology changes  
6 to seasonal load requirements and the accreditation of seasonal accredited  
7 capacity for capacity resources. In addition, there are emerging strategies  
8 to optimize generation outage schedules within the evolving capacity  
9 construct. These and other factors mean that there is a greater likelihood  
10 that WPL could be short on capacity in a particular season or look to  
11 purchase capacity from a third party (a/k/a bilateral purchase) to optimize  
12 its overall portfolio. In those (and other) circumstances, WPL would be in a  
13 position where it would be required to purchase capacity to better meet the  
14 near-term needs of its customers. WPL's proposed, symmetrical escrow  
15 mechanism would help to capture those costs.

16 **Q. Please provide any summary comments on WPL's proposed capacity**  
17 **escrow treatment.**

18 A. WPL reiterates that the proposed capacity escrow treatment is intended to  
19 provide symmetrical protection for customers and the Company, along with  
20 having a unique circumstance as it relates to the Sheboygan Falls lease, as  
21 discussed earlier.

---

<sup>6</sup> A market participant, such as WPL, has the option to net its load obligations against its accredited capacity in a fixed resource adequacy plan ("FRAP") to the extent possible; however, not all of the market participant's load or capacity needs to be offered in such a manner.

1 **Q. Please respond to the CUB witness Singletary's suggestions for**  
2 **escrow treatment of Short-term Incentive Plan ("STIP") compensation**  
3 **if the STIP costs are allowed full or partial recovery.**

4 A. As I indicated above, WPL witness Yocum responds to the majority of  
5 Mr. Singletary's and other witnesses' testimony regarding incentive  
6 compensation cost recovery. WPL has reviewed Mr. Singletary's  
7 suggestion that STIP recovery, if approved for inclusion in revenue  
8 requirement, be subject to escrow treatment and does not oppose escrow  
9 treatment of STIP.

10 **Q. Please respond to the WIEG witness Kollen's suggestions to require**  
11 **deferral of revenue requirement if any of WPL's coal-fired generating**  
12 **units retire earlier than assumed in WPL's test year revenue**  
13 **requirements.**

14 A. As indicated in WPL's initial filing, WPL supports symmetrical deferral  
15 treatment of revenue requirements if any of WPL's coal-fired generation  
16 facilities retires on a date different than currently anticipated.

17 **Q. At Direct-CW-Borden-22-23, CW witness Borden discusses the impact**  
18 **of regulatory asset treatment of the System Asset Value Credit on WPL**  
19 **rate payers. What is your response to that testimony?**

20 A. I believe that Mr. Borden's testimony was written without the benefit of yet  
21 having received WPL's response to discovery request 4-CW-1 (a copy of  
22 which is provided as Ex.-WPL-Michek-18). First, as shown in that response,  
23 WPL proposes that the deferred balance of the regulatory asset established  
24 under Power Partnership accrue carrying costs at WPL's applicable short-

**PUBLIC VERSION**

1 term debt rate. I expect that reflecting the short-term debt rate in  
2 Mr. Borden's calculations would reduce the calculated impact by more than  
3 half of that shown in Table 6 of his testimony. Second, Mr. Borden's Table  
4 6 reflects impacts that contemplate a significant growth in the Power  
5 Partnership program. Using even the highest level of participation in Mr.  
6 Borden's table and adjusting down by about one-half, the annual carrying  
7 costs would be approximately \$1.35 million, which would equate to  
8 approximately one-tenth of one percent of WPL's retail revenue at present  
9 rates. Third, as indicated in WPL's response to 4-CW-1 (Ex.-WPL-Michek-  
10 18), WPL anticipates that any regulatory asset carrying costs would be  
11 recovered from all customers and, therefore, does not represent an  
12 incremental cost shift between participating customers and non-  
13 participating customers of Power Partnership.

14 WPL's proposed deferral treatment of Power Partnership is intended  
15 solely to ensure that revenue requirements account for WPL's full costs,  
16 including any costs of the Power Partnership program (i.e., the participating  
17 customer benefits of the Power Partnership program). WPL's proposal for  
18 carrying costs based upon WPL's short-term debt rates on the regulatory  
19 asset balance that results from the Power Partnership program recognizes  
20 that WPL would be able to propose estimates of the cost recovery in annual  
21 Fuel Cost Plans and therefore the regulatory asset balances are generally  
22 expected to be outstanding for relatively short periods of time.

23 **LEVELIZATION OF EDGEWATER 5 IN THE SECOND HALF OF 2025**

1 **Q. CUB witness Singletary, WIEG witness Kollen, and Clean Wisconsin**  
2 **witnesses Lehr and Posner discuss methods of recovery of Edgewater**  
3 **Unit 5 beyond WPL’s proposal to continue the levelized recovery of**  
4 **Edgewater Unit 5. Can you briefly touch on the benefits of WPL’s**  
5 **proposal to continue the levelized recovery of Edgewater Unit 5?**

6 A. Yes. WPL’s analyses demonstrates that levelized cost recovery has real,  
7 near-term benefits for customers compared to both securitization and  
8 traditional recovery. (See Ex.WPL-Michek-6.) Compared to traditional  
9 recovery, the continued levelized recovery saves customers approximately  
10 \$57 million over the next eight years on a net present value (“NPV”) basis.  
11 In test year 2025 alone, with Edgewater 5 assumed retired for only a portion  
12 of the year, levelized recovery is estimated to save customers projected  
13 approximately \$8 million.

14 **Q. Do the parties to the settlement agreement in WPL’s last rate review**  
15 **(“Settlement”) view the levelized recovery as reasonable?**

16 A. That is my understanding. As part of its last rate review, WPL entered into  
17 the Settlement with WIEG, CUB, RENEW Wisconsin, Wisconsin Paper  
18 Council, Sierra Club, and Clean Wisconsin.<sup>7</sup> As documented in the  
19 Settlement, the parties agreed that it was reasonable to recover Edgewater  
20 Unit 5 after its retirement on a levelized cost recovery basis. More  
21 specifically, the parties agreed that:

22 10. It is reasonable that the Life NBV of Edgewater 5 shall  
23 be recovered based upon a levelized cost recovery basis

---

<sup>7</sup> Sierra Club and Clean Wisconsin signed onto the Settlement except with respect to the components related to rate design and service changes.

PUBLIC VERSION

1 upon retirement through June 2045, consistent with the  
2 assumed depreciable life of Edgewater 5 in WPL's  
3 depreciation study in Docket No. 6680-DU-109 and prior  
4 depreciation studies

5 12. The Life NBV levelized cost recovery amortization  
6 schedule supported by Attachment B, Schedule 5,  
7 through June 2045 is reasonable and based on current  
8 information.

9 13. It is reasonable to update the levelized cost recovery  
10 basis schedule presented as Attachment B, Schedule 5,  
11 in WPL's next rate proceeding to reflect the actual Life  
12 NBV upon retirement. It is reasonable to maintain the  
13 other parameters, such as duration, underlying weighted  
14 average cost of capital, and associated levelized cost  
15 recovery rate, and to adjust accordingly the amortization  
16 schedule thereafter.

17 (Docket No. 6680-UR-123) Settlement, Att. A, Section D (with emphasis  
18 added).<sup>8</sup> Moreover, on direct testimony, CUB witness Singletary reiterated  
19 CUB's view that levelized recovery remains reasonable, stating:

20 CUB continues to believe that the settlement agreement  
21 approved by the Commission in Docket 6680-UR-123  
22 represented a reasonable resolution to the settled issues  
23 within that fact specific context of that proceeding conducted  
24 two years ago. Additionally, I believe that the recovery  
25 treatment approved by the Commission as part of the  
26 settlement agreement **continues to represent a reasonable**  
27 **alternative to traditional recovery.**

28 (Direct-CUB-Singletary-46 (emphasis added).) WIEG seemingly agrees,  
29 recommending that "the Commission affirm the levelized ratemaking  
30 recovery of the remaining costs of Edgewater 5 approved in the last rate  
31 case proceeding in the absence of securitization financing. (Direct-WIEG-  
32 Kollen-3.)

---

<sup>8</sup> This citation is not record evidence.

**PUBLIC VERSION**

1           In addition, Commission staff witness Adams (at Direct-PSC-Adams-  
2           20) recognizes that WPL’s modeling assumptions for the cost recovery of  
3           the remaining net-book value of Edgewater Unit 5 are reasonable.

4   **Q.    Are the revenue requirements proposed by WPL in this proceeding**  
5   **calculated in accordance with the Settlement?**

6   A.    Yes. WPL’s revenue requirements in this proceeding are consistent with the  
7   terms of the Settlement.

8   **Q.    CUB witness Singletary and WIEG witness Kollen discuss alternatives**  
9   **as regards to the recovery of the anticipated remaining net book value**  
10   **of Edgewater Unit 5 after retirement. Can you please provide context**  
11   **on that?**

12   A.    While Mr. Singletary notes that the levelized recovery of Edgewater Unit 5’s  
13   remaining net book value is reasonable, he also outlines certain alternatives  
14   that the Commission might consider beyond the alternatives analysis I  
15   presented in direct testimony. Mr. Singletary contends that even the  
16   analysis of partial securitization was too narrow of a view of considered  
17   alternatives and suggests additional alternatives should be considered,  
18   including:

- 19           • Excluding all cost recovery (both of and on) from rates;
- 20           • Allow WPL to recover the cost of the remaining net book value,  
21           but not allow a return on that remaining investment.

22           WIEG witness Kollen goes further and asks the Commission to direct  
23   the Company to “increase[e] the size of the securitized debt issuance(s) to

1 at least \$400 million from the \$100 million that WPL analyzed.” Moreover,  
2 Mr. Kollen “recommend[s] that the Commission incentivize the Company to  
3 pursue securitization financing to the extent that it is economic, by reducing  
4 the ROE allowed in the weighted cost of capital used to calculate the  
5 levelized recovery of the remaining costs through base revenues if it does  
6 not do so.” (Direct-WIEG-Kollen-4 (emphasis added).)

7 **Q. What is WPL’s general reaction to the testimony of Mr. Singletary and**  
8 **Mr. Kollen?**

9 A. WPL recognizes that it is reasonable for CUB and WIEG to comment on  
10 WPL’s alternatives analysis, and even provide their own independent  
11 alternatives analysis if so desired. However, it is WPL’s expectation that  
12 CUB and WIEG (and the other parties to the Settlement) will continue to  
13 stand by the levelized recovery of Edgewater Unit 5 that they agreed to as  
14 part of the Settlement. The levelized recovery provides a balanced recovery  
15 mechanism, which provides customers with near term savings.

16 While Mr. Singletary reiterates the reasonableness of the levelized  
17 recovery, he clearly supports the Commission consideration of other  
18 alternatives, and suggests that the Commission can use this discussion to  
19 create leverage for opportunity to enhance customer interests over the  
20 utility. WIEG, through its external witness, Mr. Kollen, goes further, directly  
21 advocating for something other than the levelized cost recovery WIEG  
22 agreed to in the last rate proceeding.

23 **Q. Do you have any specific response to Mr. Kollen’s testimony critiquing**  
24 **the alternative analysis provided in you direct testimony?**

## PUBLIC VERSION

1 A. WIEG witness Kollen comments on the net present value revenue  
2 requirement (“NPVRR”) calculations of the various Edgewater 5 recovery  
3 options and questions why they are not the same, particularly when  
4 comparing a 20-year option versus a 30-year option. The rationale for this  
5 difference relates to the discount methodology used in the analysis. The  
6 regulatory convention that has generally been used is to utilize the  
7 weighted-average cost of capital (“WACC”) as the discount rate. However,  
8 the calculated WACC is a combination of pre-tax debt and after-tax equity.  
9 In reality, the discount rate to make the calculations equivalent would be the  
10 pre-tax WACC, which adjusts the equity rate to a pre-tax level. By not  
11 reflecting the discount rate as the pre-tax WACC, the levelized methodology  
12 causes the effective ROE that WPL earns with the levelization proposal to  
13 be less than the authorized level, which was reflected in testimony in the  
14 prior rate proceeding. As incorporated in Ex.-WPL-Michek-5 in Docket No.  
15 6680-UR-123, versus the nominal ROE of 9.8 percent in performing the  
16 calculation, the effective ROE that WPL would earn as part of the  
17 levelization methodology is 9.2 percent as a result of the imperfect discount  
18 rate being used in the process. Thus, WPL is already reflecting a lower rate  
19 of equity return with its levelization methodology.

20 **Q. Mr. Kollen’s testimony also recommends that the Commission direct**  
21 **the Company to pursue at least \$400 million, and as much as the full**  
22 **\$473 million, and for the Commission to encourage and incentivize**  
23 **WPL to do so by stating its intention to consider a lower ROE if the**  
24 **Company doesn’t pursue a higher level of securitization. Is it your**

1           **understanding that Mr. Kollen’s recommendation are consistent with**  
2           **existing securitization law in Wisconsin?**

3       A.     I am not an attorney and therefore my response is based solely on my  
4           general understanding of the existing securitization statutory authority in  
5           Wisconsin. I understand that the existing securitization statute (Wis. Stat.  
6           § 196.027) is voluntary and at the discretion of the proposing utility. Wis.  
7           Stat. § 196.027(3)(b) provides (in part and with emphasis added):

8                       **The commission may not order or otherwise directly or**  
9                       **indirectly require an energy utility to use environmental**  
10                      **trust bonds** to finance any project, addition, plant, facility,  
11                      extension, capital improvement, environmental control  
12                      equipment, or any other expenditure, unless, except as  
13                      provided in sub. (2) (c), the energy utility has made an  
14                      application under sub. (2) (a) to finance such expenditure  
15                      using environmental trust bonds.

16           Thus, the recommendations for the Commission to require WPL to  
17           utilize securitization, or alternatively suffer financial harm through a lower  
18           ROE, which would effectively be an indirect requirement, would seemingly  
19           be a violation of the law.

20           In addition, my understanding is that the ability to securitize is limited  
21           to environmental control equipment, whether on the direct capital cost or on  
22           the unrecovered value of such property that is retired. Notwithstanding the  
23           statutory limitations, Mr. Kollen recommends that the Commission directly  
24           or indirectly require WPL to securitize all or a portion of Edgewater Unit 5’s  
25           remaining net book value. Moreover, by advocating for the securitization of  
26           at least \$400 million and up to Edgewater Unit 5’s full book value, Mr. Kollen  
27           appears to be inadvertently advocating that WPL securitize amounts that

**PUBLIC VERSION**

1 are not associated with environmental control equipment, which as I  
2 understand it would be outside of what is legally allowable.

3 **Q. What is your response to Mr. Singletary's statement that the**  
4 **Commission could consider "complete recovery disallowance of any**  
5 **unrecovered plant balance at the time Edgewater 5 is retired"?**

6 A. I do not consider the alternatives discussed by Mr. Singletary to be  
7 reasonable alternatives. Mr. Singletary's focus seems to be on equipping  
8 the Commission with "leverage." (See Direct-CUB-Singletary-50.) He  
9 seems not to have been arguing that denial of recovery or recovery on  
10 would, in fact, be reasonable, as he does not address the principles that I  
11 presented in my direct testimony, which FERC considers in addressing the  
12 recovery of retired assets with remaining net book value. He also does not  
13 respond to the detailed discussion provided by WPL witness Metin Celebi,<sup>9</sup>  
14 prior recovery permitted by the Commission and other state utility  
15 commissions,<sup>10</sup> or the points of my testimony that describe how Edgewater  
16 5 has served customers for many years and how customers will experience  
17 relative savings to continued operation of Edgewater 5 as supported by  
18 WPL's Clean Energy Blueprint.<sup>11</sup> Given these points, I do not think that it  
19 would be reasonable for the Commission to consider the alternatives  
20 presented by Mr. Singletary. Whereas, the record supports that WPL's

---

<sup>9</sup> See generally, Direct-WPL-Celebi.

<sup>10</sup> See Direct-WPL-Celebi-30; & Ex.-WPL-Celebi-2.

<sup>11</sup> See e.g., Direct-WPL-Michek-c-59 to 68.

1 levelization proposal does provide a reasonable approach for WPL and  
2 customers.

3 **Q. What is your response to Mr. Lehr’s discussion, at Direct-CW-Lehr-10,**  
4 **of the opportunities under the IRA for increased value from PTCs and**  
5 **ITCs?**

6 A. WPL has consistently looked for opportunities to increase benefits to  
7 customers and will continue to do so. To this end, WPL promptly reacted to  
8 the passage of the IRA to bring increased benefits to customers and thus is  
9 already delivering on a significant portion of the potential benefits of the IRA  
10 to WPL and its customers.

11 As discussed in my direct testimony, WPL had planned to own and  
12 operate the previously approved solar projects through tax equity  
13 partnerships. However, as a result of the IRA, WPL identified that it could  
14 increase the benefits to customers by directly owning and operating those  
15 solar projects (and the planned BESS projects) and quickly transitioned to  
16 that structure. In a September 15, 2022, WPL notified the Commission that  
17 it was terminating its tax equity financing, explaining that:

18 ...recent, material changes to the federal tax code have  
19 significantly enhanced the tax incentives available to  
20 renewable energy projects, such that WPL can now deliver  
21 even greater benefits to customers through traditional utility  
22 ownership. On August 16, 2022, President Biden signed the  
23 Inflation Reduction Act of 2022 (“IRA”) into law. As relevant  
24 here, the new legislation extends the production tax credit  
25 (“PTC”) and investment tax credit (“ITC”) for wind and solar  
26 projects; makes solar projects eligible for the PTC; and  
27 authorizes taxpayers to transfer renewable tax credits to other  
28 corporate taxpayers in exchange for cash.

## PUBLIC VERSION

1 After careful evaluation, and as explained in greater detail  
2 below, WPL determined that pursuing these enhanced tax  
3 incentives through traditional utility ownership will produce  
4 greater customer benefits than its prior tax equity financing  
5 proposal. This is because the IRA effectively addresses and  
6 resolves the primary factors that drove WPL to pursue tax  
7 equity financing in the first place—namely, efficient  
8 monetization of the ITCs and avoiding IRS normalization  
9 requirements. Under this new tax regime, WPL estimates that  
10 traditional ownership of the Solar Projects approved by the  
11 Commission in CA I and II, utilizing the enhanced benefits of  
12 the IRA, will provide approximately \$138 million in present  
13 value savings for customers as compared to tax equity  
14 ownership under prior tax law.

15 That notification, which was submitted in Docket Nos. 6680-CE-182, 6680-  
16 CE-183, 6680-AE-120, and 6680-AE-121, is provided as Ex.-WPL-Michek-  
17 15.

18 **Q. Mr. Lehr recommends that WPL pursue opportunities for funding and**  
19 **to increase benefits to customers based upon IRA/IIJA funding**  
20 **opportunities, including under the Energy Infrastructure**  
21 **Reinvestment (“EIR”) Program. (See e.g., Direct-CW-Lehr-16.) Can you**  
22 **please comment on this?**

23 A. In addition to its efforts to increase the benefits of its solar, wind and BESS  
24 projects through tax credit transferability, WPL continues to evaluate  
25 opportunities for funding and to increase benefits to customers based upon  
26 the IRA and IIJA to help fund projects on behalf of customers. That includes  
27 pursuing loans under the Department of Energy (“DOE”) EIR program.

28 **Q. What is the EIR program?**

29 A. The IRA provided loan authority of up to \$290 billion in total principal for the  
30 DOE’s Loan Programs Office (“LPO”), which is administered under Title 17

1 of the Energy Policy Act of 2005. Specifically, the IRA created a new loan  
2 guarantee program—the EIR program—under section 1706 of Title 17  
3 (“Section 1706”) (codified at 42 U.S.C. § 16517). The EIR program  
4 authorizes loan guarantees for (among others) projects that:

- 5 (1) retool, repower, repurpose, or replace energy  
6 infrastructure that has ceased operations; or  
7 (2) enable operating energy infrastructure to avoid, reduce,  
8 utilize, or sequester air pollutants or anthropogenic emissions  
9 of greenhouse gases.<sup>12</sup>

10 “Energy infrastructure” includes electric generation facilities and associated  
11 equipment.

12 **Q. What types of projects are eligible for loans under the EIR?**

13 A. Through the EIR, eligible projects are those that include “upgrades or  
14 upgrading energy infrastructure so that the facility can restart or operate more  
15 efficiently at higher output or lower emissions, replacing retired energy  
16 infrastructure with clean energy infrastructure, and building new facilities for  
17 clean energy purposes that utilize legacy energy infrastructure.”<sup>13</sup>

18 **Q. You mentioned that WPL is pursuing an EIR loan. Please expound  
19 upon that.**

20 A. In August 2023, WPL submitted a confidential application, referred to as a  
21 Part I application, to the LPO for a loan guarantee for all eligible Section  
22 1706 projects that are in WPL’s Clean Energy Blueprint analysis as of the  
23 time of submitting the application. This included requesting \$756 million of

---

<sup>12</sup> 42 U.S.C. § 16517(a).

<sup>13</sup> WPL understands that a loan guaranteed under the EIR could *potentially* be used for certain remediation activities provided that it is directly related to new qualifying energy infrastructure.

1 funding through 2023-2028 for future, anticipated projects. If approved, this  
2 LPO funding would have an interest rate of the U.S. Treasury curve, plus a  
3 spread of 0.375%, plus a risk-based charge. Depending on the size of the  
4 risk-based charge and any incremental ongoing administrative charges, the  
5 LPO funding could reduce the financing cost to WPL's customers when  
6 compared to the costs of traditional debt financing raised in the debt capital  
7 markets by approximately 1%.

8 **Q. Clean Wisconsin witness Posner posits that WPL can use "EIR to**  
9 **refinance the outstanding balance of Edgewater 5." (Direct-CW-**  
10 **Posner-3.) Do you agree?**

11 A. No. It is my understanding that refinancing a legacy fossil-fuel generating  
12 facility, such as WPL's Edgewater facility, is not a qualifying project under  
13 Section 1706 as it is not a direct replacement or improvement of the  
14 generating facility. However, the renewable energy or storage that WPL  
15 plans to put in service that replaces the energy and capacity that is provided  
16 by the Edgewater facility may be a qualifying project and has been included  
17 by WPL in the Part I application.

18 **Q. When do you expect to hear from the LPO on WPL's loan application?**

19 A. WPL anticipates hearing from the LPO regarding the Part I application  
20 around November 2023. If the LPO deems WPL's projects eligible and  
21 ready to proceed, the LPO will invite WPL to submit a Part II application.  
22 The Part II application review the projects from programmatic, technical,  
23 environmental, and financial perspectives and determine whether the  
24 projects are ready to advance to due diligence and term sheet negotiation.

1 I understand that LPO's loan application process can take up to  
2 12 months prior to achieving a conditional commitment from the LPO, which  
3 would be beyond the timeframe of a Commission decision in this  
4 proceeding.

5 **Q. Is WPL pursuing other opportunities under the IRA or IIJA?**

6 A. Yes. WPL is evaluating and pursuing, where appropriate, other  
7 opportunities under the IRA and IIJA. For example, WPL notified DOE of its  
8 intent to apply for an incentive payment related to a project at WPL's Prairie  
9 du Sac hydroelectric facility. The incentive payment is available under  
10 Section 247 of the Energy Policy Act of 2005, as amended by Section  
11 40333 of the IIJA ("Section 247").<sup>14</sup> Under that provision, an owner or  
12 operator of a qualified hydroelectric facility can receive an incentive  
13 payment for projects related to improving grid resilience and dam safety and  
14 related to environmental improvements. WPL intends to file an application  
15 under that provision in early October 2023 related to the replacement of  
16 Prairie du Sac's tainter gates. WPL's response to Commission staff Data  
17 Request No. PSCW-JMR-1.3 (which is provided as confidential Ex.-WPL-  
18 Michek-16c) provides additional information regarding WPL's efforts to  
19 identify opportunities to bring additional benefits to customers, including  
20 through grants, loans, and tax credit. WPL's efforts to access these  
21 opportunities are ongoing, and the outcomes of these efforts remain  
22 uncertain.

---

<sup>14</sup> Codified at 42 U.S.C. § 15883.

1 **Q. Please summarize your understanding of Commission Staff witness**  
2 **Justin Adam’s and CUB witness Singletary’s suggestions regarding**  
3 **the continuation of an Earnings Sharing Mechanism (“ESM”).**

4 A. Mr. Adam’s testimony summarizes WPL’s currently authorized ESM, and  
5 shares information about WPL’s performance under the ESM. However, Mr.  
6 Adams does not appear to provide any recommendation with regards to the  
7 ESM.

8 Mr. Singletary compares WPL’s currently-authorized ESM to the  
9 ESM in place for Northern States Power Company – Wisconsin and the  
10 WEC Energy Group utilities (Wisconsin Electric Power Company,  
11 Wisconsin Gas Company, and Wisconsin Public Service Corporation). Mr.  
12 Singletary specifically recommends that the Commission keep in place an  
13 ESM for WPL and suggests that the Commission could either maintain  
14 WPL’s currently authorized ESM or modify WPL’s ESM to align with that  
15 approved for the WEC Energy Group utilities.

16 **Q. What is WPL’s response to testimony regarding continuation of WPL’s**  
17 **currently authorized ESM?**

18 A. As Mr. Adam’s testimony indicates, WPL’s current and prior ESM all  
19 resulted from settlements, that were ultimately accepted and approved by  
20 the Commission in WPL’s prior rate cases. In each of those prior rate cases,  
21 the settlements were reached based upon relatively limited review of WPL’s  
22 proposed revenue requirements as compared to the full Commission staff  
23 audit in this proceeding. The ESM were integral components of negotiated  
24 revenue requirements by the settling parties in those proceedings, including

## PUBLIC VERSION

1 WPL, as it provided the parties protections in lieu of the expanded efforts  
2 that would be required of them to do a full audit of revenue requirements.  
3 Another key integral component of each of those settlements was the  
4 authorized ROE. Certainly, there were various other issues of give and take  
5 between each of the settling parties in each of those proceedings and each  
6 party balanced their own priorities and evaluation of risks and opportunities  
7 in reaching those settlements.

8 At this time, a settlement currently does not exist in this proceeding.  
9 WPL does not believe that an asymmetrical ESM is appropriate in a fully  
10 litigated case. WPL has accepted the asymmetrical ESM in prior case  
11 settlements with the full understanding of the risks and opportunities it faced  
12 relative to the revenue requirements upon which each settlement was  
13 based. In a fully litigated proceeding, WPL and all parties defend their  
14 positions and ultimately all parties are subject to the Final Revenue  
15 requirement approved by the Commission. The asymmetrical nature of the  
16 ESM, in the absence of negotiated terms to which it is tied, in a litigated  
17 proceeding would tip the balance of risk toward WPL; WPL's upside  
18 opportunities would be truncated, but WPL would retain the overall  
19 downside risk (e.g., weather, inflation). The asymmetrical ESM would  
20 become more problematic if it is tied to an ROE that does not recognize the  
21 expectations of investors for comparable risk investments (as discussed by  
22 WPL witnesses Bulkley and Rauch).

23 Notwithstanding those concerns and in consideration of the  
24 circumstances of this proceeding as a whole, if the Commission were to

1 approve WPL's requested ROE and capital structure, WPL is supportive of  
2 an ESM that is comparable to its current ESM.

3 **Q. Please summarize Walmart witness Kronauer's discussion of the**  
4 **Commission's approved policies on current return on CWIP.**

5 A. Mr. Kronauer's testimony indicates that Walmart opposes allowing a current  
6 return on CWIP and generally recommends that the Commission reject past  
7 Commission practice allowing current return on CWIP. Alternatively, Mr.  
8 Kronauer's testimony suggests that if the Commission approves current  
9 return on CWIP, that the Commission should recognize that including CWIP  
10 in rate base favors the Company and its investor by shifting risk onto  
11 customers and reducing uncertainty of cost recovery, and that such  
12 reduction of risk should be reflected in the Commission's consideration of  
13 ROE in this proceeding.

14 **Q. What is your response to Mr. Kronauer's suggestions regarding**  
15 **authorizing current return on CWIP?**

16 A. First, I'm confident that the Commission's decisions in prior rate cases have  
17 considered its own practices in setting or approving ROE. Thus, I don't think  
18 Mr. Kronauer is asking the Commission to do anything it doesn't already do  
19 when setting authorized ROE. In addition, a modification away from current  
20 return on CWIP practice would signal a shift in risk to the utility relative to  
21 current practice.

22 Second, the Commission's practices related to CWIP are long  
23 standing and seek to strike a balance between current customer cost and  
24 providing sufficient cash flow to the utility while constructing assets.

## PUBLIC VERSION

1 Third, in recent years, the amount of CWIP allowed to earn a current  
2 return has reduced as most large projects requiring Commission approval  
3 have accrued AFUDC on the full CWIP balance activity.

4 Given the foregoing, WPL believes the current Commission practice  
5 strikes an appropriate balance between the customers' and the utility's  
6 interests.

7 **Q. CUB witness Steve Kihm's testimony discusses affordability as an**  
8 **important consideration in evaluating a just and reasonable ROE. Has**  
9 **WPL considered the impacts of affordability in evaluating the**  
10 **appropriate ROE in this proceeding?**

11 A. WPL considered affordability in proposed in ROE. Despite materially  
12 increasing interest rates and despite evidence provided by WPL witness  
13 Ann Bulkley regarding the reasonable range of ROEs, WPL proposed a  
14 10.0 percent ROE, which was "... at the low end of the range of reasonable  
15 returns." (Direct-WPL-Bulkley-68.) WPL's requests in this proceeding have  
16 balanced customer and investor considerations. WPL takes the impacts of  
17 rate increases to its customers very seriously and is making investments in  
18 resources (most subject to Commission approval) that will provide relative  
19 benefits to consumers for years to come while also ensuring safe and  
20 reliable service. WPL strives to control O&M costs despite inflationary  
21 pressures. In addition, WPL seeks to implement rates and programs  
22 (including those detailed in WPL witness Veronica Stober's testimony) that  
23 assist customers manage their energy usage and energy costs.

1 **Q. Dr. Kihm’s testimony in discussing WPL witness Bulkley’ testimony**  
2 **states that “As noted at the outset, there is so much slack built into**  
3 **the ROE that WPL hasn’t even asked for a change in ROE even through**  
4 **interest rates rose by hundreds of basis points.” (Direct-WPL-Kihm-**  
5 **12.) Do you have any response to Dr. Kihm’s testimony on this matter?**

6 **A.** As noted in other discussions above, WPL’s authorized ROE since 2013  
7 have been established through Commission approved Final Decisions that  
8 signed off on settlements to which CUB was a signatory. In each such  
9 settlement, there was a negotiated balance of risk and opportunity that each  
10 party, including CUB, evaluated and ultimately agreed upon. Dr. Kihm omits  
11 that history and simply contends that ROEs have been far too high for too  
12 long.

13 In addition, Dr. Kihm’s contention that WPL not asking for an  
14 increase in ROE demonstrates that there is “slack” in the ROE is inaccurate.  
15 As discussed above, customer affordability was among the factors that WPL  
16 considered when it determined to request the maintain its current ROE. As  
17 such, when Dr. Kihm claims that WPL’s request demonstrates “slack” in the  
18 ROE, he is effectively penalizing the Company for considering customer  
19 affordability in its requested ROE.

20 **Q. Dr Kihm’s testimony states that affordability should bear directly on**  
21 **the determination of the fair ROE. Further stating that as utilities add**  
22 **more and more expensive plant, that may in turn put downward**  
23 **pressure on the just and reasonable ROE, not for financial reasons,**

1       **but because of affordability concerns. What is your reaction to Mr.**  
2       **Kihm's testimony?**

3    A.    As stated previously, I am not an attorney; I am also not an economist.  
4        However, almost my entire professional career, both while at the  
5        Commission and while working at WPL, has focused upon utility rate  
6        regulation.

7                In simple terms, the regulatory compact provides that as a public  
8        utility, WPL has an obligation to serve its customers and in return should  
9        have a reasonable opportunity to earn a just and reasonable return on its  
10       investments. A just and reasonable return, logically speaking, should be  
11       based upon expected returns for investors related to comparable risk  
12       investments. If the authorized ROE is compensatory for comparable  
13       investment risk, then the ROE is just and reasonable.

14               As I understand Mr. Kihm's testimony, he seems to imply that  
15       because the cost to provide service is increasing, investors that fund those  
16       costs should either (1) accept lower returns per dollar invested, or (2) in  
17       some way enable the equivalent return by driving down the utility's share  
18       prices to the point at which they would still earn their required return.  
19       However, as described in more detail in WPL witness Al Rauch's rebuttal  
20       testimony, Dr. Kihm's testimony does not accurately reflect the real-world  
21       effects that would flow from implementing the academic theories he  
22       discusses. Dr. Kihm's recommendations seem to ignore the chain of events  
23       that would be caused if utility share prices are driven down as a result of

**PUBLIC VERSION**

1 regulatory action that does not allow investors to receive a reasonable  
2 return.

3 **Q. Are there any other topics that you would like to address at this time?**

4 A. Yes, there are two additional topics that I would like to address. First, there  
5 is a change in a wholesale power supply sales contract that will result in a  
6 change in the retail jurisdictional allocation of costs versus the allocation  
7 factors that WPL utilized in its filing. Second, WPL has experienced an  
8 increasing uptick in O&M costs associated with underground locates that is  
9 not reflected in WPL's filed revenue requirements.

10 **Q. Please explain the change in the wholesale power supply sales  
11 contract and the impact it has on the test years revenue requirements.**

12 A. WPL has a wholesale power supply agreement with [REDACTED]

13 [REDACTED]  
14 [REDACTED]

15 [REDACTED] has experienced a [REDACTED] since  
16 the contract became effective [REDACTED]

17 [REDACTED]  
18 [REDACTED]  
19 [REDACTED]  
20 [REDACTED]

21 [REDACTED] would change  
22 certain jurisdictional allocators and result in a modest increase in the retail  
23 allocation of costs, potentially impacting 2024, 2025, or both. In light of this  
24 uncertainty, WPL requests the ability to defer any impact such an event

## PUBLIC VERSION

1 occur.<sup>15</sup> Ex.-WPL-Michek-14 provides an example of how such a  
2 calculation could occur.

3 **Q. Please summarize WPL's current estimate of the increase in**  
4 **underground locate costs and the reasons for those cost increases.**

5 A. WPL currently estimates that the combined electric and natural gas utility  
6 costs of underground locates will increase to approximately \$14 million per  
7 year in 2024 and 2025. WPL's filed revenue requirements included  
8 approximately \$8.4 million in 2024 and \$8.7 million in 2025. Based on  
9 current best information, WPL anticipates an increase in these costs of  
10 approximately \$5.6 million in 2024 and approximately \$5.3 million in 2025  
11 relative to WPL's original filing. These cost increases would be allocated  
12 approximately 53 percent to the electric utility with the remainder allocated  
13 to the natural gas utility. The electric utility share of these cost increases  
14 would be allocated entirely to the retail jurisdiction as the locate work is  
15 being completed on WPL's distribution systems. The drivers of these cost  
16 increases are two-fold. First, the volume of locates has increased  
17 significantly as entities expand fiber optic communications networks  
18 (examples in 2023 include expansions in Janesville, Platteville, Cottage  
19 Grove, and Stoughton), and other efforts to expand broadband, which will  
20 help address the so-called 'digital divide'. Second, the cost per locate  
21 activities, which are third-party costs, have increased. In order to keep our

---

<sup>15</sup> Such an event would also result in a change in the native requirements to be reflected for purposes of the Fuel Cost Plans for both 2024 (if known prior to the Commission's decision in this proceeding) and 2025 (if known prior to the Commission's decision on the 2025 Fuel Cost Plan).

## PUBLIC VERSION

1 communities safe, state law has a 'call before you dig' requirement, which  
2 WPL supports and continues to encourage, but does come with added cost.  
3 WPL's filed revenue requirement already reflected an increase in costs  
4 based upon activity through 2022 and generally assumed that costs would  
5 stabilize at that level. However, WPL continues to experience further  
6 increasing costs. Ex.-WPL-Michek-17 provides additional detail on  
7 historical and projected locate project costs.

8 **Q. How does WPL propose to address these cost increases in this**  
9 **proceeding?**

10 A. WPL proposes that the revenue requirements for the Final Decision in this  
11 proceeding include these increased costs estimates and set the costs  
12 subject to escrow accounting. If the Commission is not comfortable with  
13 increasing the revenue requirements to reflect the estimated cost increases  
14 at this time, WPL's proposes that the Commission authorize escrow  
15 treatment based upon the costs estimates in WPL's original filing.

16 **Q. Does this conclude your pre-filed rebuttal testimony?**

17 A. Yes
